Mongo and Azure Account Information

1. Keep this available during account setup.
2. Make sure you know your usernames and passwords to access these accounts later. You WILL need this information.

This list is not in the same order as the steps for creating your account.

The information that is highlighted in yellow is <mark>very important.</mark> You MUST write this down exactly as you create it – upper/lower case and any numbers. You cannot use special symbols such as @ (no special symbols of any kind) in any of the highlighted entries.

Suggestion: use the same name for all usernames. It will make it easier to remember them.

MONGO	EXAMPLE/INSTRUCTIONS	YOUR ENTRY
Mongo Account Name	This is the name of your account	
Mongo Username	This is your login username	
E-mail	The email address you used to register this account	
Account Password	Password is case sensitive	
Cloud Provider	Microsoft Azure is most common	
Plan	This must be set to this entry =>	**Single-node (development), Sandbox**
3. New Database Name	This is the container that the Dex records are stored	
1. Database Username	It CANNOT contain any special characters	
2. Database User Password	It CANNOT contain any special characters	

THIS IS EXTREMELY IMPORTANT.

Write your information here USING THE ENTRIES FROM THE TABLE ABOVE AND FROM YOUR MONGO ACCOUNT:

<div align="center">1   2   FROM MONGO   3</div>
mongodb://databaseusername:databaseuserpassword@aabbb.mongolab.com:11111/NewDatabaseName

mongodb://_____:_____@_____.mongolab.com:_____/_____

GITHUB INFORMATION

GitHub Username	This is the source repository of the code for your website. You need this if you ever upgrade to the latest version of Nightscout software.	
GitHub Password		

AZURE INFORMATION

http://www.azurewebsites.net

Account Email	
Account Password	
Date account setup	
30-day deadline to change to pay-as-you-go or lose your account	
4. Website name All one word, no special characters.	

The data use in Azure is low enough that under typical use it will remain free. If you hit the cap on your account, you will not get a notification; your account will be inaccessible until you change to a shared plan or until you wait for the 24 hour time period to elapse.

If you do not change to pay-as-you-go within the 30 days, you will lose your account and you will have to recreate it.

4.

Your personal website name is: https://websitename.azurewebsites.net
You will use this URL for accessing your T1's Dexcom values.
For Pebble, the endpoint for setup is: https://websitename.azurewebsites.net/pebble

Our free trial ended with azure saturday morning at 3am. We didn't change our subscription to pay as you go BEFORE the free trial ended. This left us without nightscout for the weekend. I was gonna get with Microsoft monday morning and get my account set back up... but my daughters blood sugars got out of control sunday night. If we had her nightscout live and working I would have been alerted before it ever came to this. Her infusion set stopped working and she was getting zero insulin. It could have been worse but it wasnt. I missed half a day of work today and she missed half a day of school so we could get her numbers back under control. My message to you all is... don't let your free trial expire without changing your billing options to pay as you go. Thanks again nightscout. I appreciate your software more than you will ever know.
